DETAILED ACTION

Election/Restrictions

- I. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 56-64, drawn to mapping surface shape points to texture data, classified in class 345, subclass 583.
 - II. Claims 1-28, drawn to creating first and second meshes corresponding to an object, classified in class 345, subclass 420.
 - III. Claims 29-63, drawn to defining and tessellating first and second patches of an object, classified in class 345, subclass 423.

The inventions are distinct, each from the other because of the following reasons:

Inventions I, II and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because Invention I does not require the particulars of the creating of first and second meshes of an object of Invention II nor does it require the defining and tessellating of first and second patches of an object of Invention III. The subcombination has separate utility such as binning display objects to improve processing by dividing objects down into more primitive data and determining a solid model rendering of an object from only 2D object data.

Art Unit: 2676

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
